## REINFORCED TURF SPECIFICATION SHEET

### DETAILS

County Turf's fibre reinforced turf is grown on imported sand rootzone mixed with polypropylene fibres.

Hard-wearing and durable, the turf is grown on either fibre sand or Loksand material.

The reinforced turf provides a surface that is strong and load-bearing, with improved wear tolerance and rapid percolation rates.

It is harvested 40mm thick in large 1.25m wide rolls for instant playing pitches.

Reinforced turf is suitable for sports pitches, car parks, driveways and emergency access tracks.

<b>Soil types</b>	Sandy loam
<b>Grass Species</b>	Perennial Ryegrass Smooth Stalked Meadow Grass
<b>Suitability: General</b>	Short-cut hardwearing areas Car Parks Emergency Access Tracks Driveways
<b>Suitability: Sport</b>	Equestrian areas Football pitches Racecourses Rugby pitches
<b>Features</b>	Reinforced
<b>Support Services</b>	Contract growing Delivery (own fleet) Installation
<b>Roll Length</b>	13 metres
<b>Roll Widths</b>	1250mm; 740mm
